Bronze Recognition Plaques with sponsors names are an easy way to raise all or more that is required to purchase a new Verdin clock.

100 names on the clock at the \$250 dollar Level will raise about \$21,000

BELLS & CLOCKS
SINCE 1842

Model: **MCC3**

Master Clock Controller

The MCC3 is designed to provide many years of worry free automatic control of your total clock system. The Verdin MCC3 is a microprocessor based clock control system comprising a high precision crystal-controlled time base, programming keypad, LCD display, and all the required interface ports. This highly flexible clock control device is capable of overseeing the complete operation of a tower clock or a street clock system. It has been designed to interface with all Verdin peripheral elements.

Technical Specifications

Power Supply

The MCC3 operates on standard 120VAC, 50-60 Hz. single phase power. It is fused for a total of six amps (nominal). The MCC3 is supplied with a ten year internal battery back-up for maintaining time and program memory during power failure.

Time Base

Superior accuracy is assured through the use of a temperature-compensated crystal-controlled time base operating at a frequency of 32.768 kHz. Accuracy shall be within +/- 5 seconds per month at a normal operating temperature of 20° C +/- 20 (Maximum variation of +/- 20 seconds per month at extremes of operating range, -40° C and 85° C.)

BELLS & CLOCKS
SINCE 1842

Tower/Street Clock Control

The MCC3 maintains accurate present time in accordance with the internal crystal controlled time base. In addition a separate register is maintained which constitutes an internal "pilot clock" for the tower clock(s) or street clocks being controlled. In case of power failure, the internal time base and actual time keeping are maintained via the back-up batteries.

During times of power failure, when external movements (tower/street clocks) are stopped, the internal "pilot clock" is also held at the time when power failure began. When power is restored this register is examined, and automatic correction of the Tower/street clock is made.

The MCC3 is cable of controlling either A/B impulse style timepieces or synchronous timepieces. Selection between either impulse or synchronous mode is made via a jumper setting. LED's on MCC3's front panel will indicate its operational state.

Daylight Saving Time (DST)

The MCC3 is provided with a fully-automatic Daylight Saving Time set function. This function maintains the proper time on both the MCC3 and the Tower/Street clock throughout the time change period. Front panel user settings allow the unit to be set in the current USA adopted system or a custom user defined system.

Hour Strike and Light Function

The MCC3 provides two time programmable external outputs intended to drive an external lighting system and/or the striker of an external hour strike bell. Front panel user settings allow the operation times for each output to be defined.

Communications

The MCC3 provides two external communication ports. The first is designed to interface with Verdin's optional GPS unit and the second provides an external RS-232 interface port. Through the MCC3 RS-232 port the time may be read or set, the hand position may be read, the light relay activated or deactivated, the hour strike relay activated or deactivated. In addition the RS-232 port provides for a seamless interface to Verdin's optional electronic carillon and chiming equipment. All functions other than the remote light and hour strike are accessible via the keypad.

New Construction

Construction in Physical Facilities

Naming of Facility

It shall be the prerogative of the Board of Education to establish the need and appropriateness for naming any school unit, which includes all outdoor and indoor facilities of the school.

1. It shall be the general policy to name schools and school facilities for persons who have attained prominence locally and nationally, or in the fields of education, science, art, statesmanship, political science, or military achievement; early pioneers of the community or the State of Connecticut; outstanding presidents of the United States of America; or geographical landmarks.
2. The general procedure for selecting a name for a school shall be as follows:
 - a. The Board shall appoint a committee comprised of two representatives of the Board of Education chosen by its President; two representatives of the Citywide School Construction Committee chosen by its Chair; one teacher/administrator representative appointed by the Board of Education; and one PTA/PTO representative appointed by the Board of Education.
 - b. The school-naming committee shall then present a recommended name to the superintendent who will forward it to the Board.
 - c. The Board shall then accept or reject said recommendation from the committee.

7551

New Construction

Naming Facilities

The naming of school buildings, major portions of buildings, or school grounds is the responsibility of the Board of Education. In fulfilling this responsibility, the Board will make every effort to respect community preferences. Such names should be clearly identifying, widely known, and recognized.

It is the policy of the Board to name school buildings as close as possible to the time construction begins in order to lessen the confusion about the new schools.

When naming new buildings, major portions of buildings, or school grounds, the Board shall formally identify the need for a naming process for the identified school locations, as well as criteria it wishes to be considered in the process.

When naming a school building, major portions of school buildings, or school grounds the Board shall direct the Superintendent to establish a committee, subject to Board approval, comprised of the Superintendent or designee, the building Principal, faculty member, parents, community members, and, if appropriate, students to consider name recommendations for consideration by the Board. Opportunities for public input must be made available prior to the committee's recommendation to the Board. Such opportunities for public input must be publicly announced in newspapers and on the District website.

When naming new buildings, the committee shall have representation by the community members that is representative of the entire school district. The committee shall propose a list of names to the school board of not more than five (5) names for Board consideration.

If a major portion of a school building or school grounds (media center, auditorium gymnasium, field, etc.) is proposed to be named after an individual, that person shall have attained local or national prominence via significant contributions in any field of endeavor. Such contributions or the significance of their place in history shall be clearly established beyond the generation of the contribution. Individuals so recognized shall no longer be active in his/her career. Further, the individual for whom a portion of a school building or school grounds is to be named must be shown to have broad-based, long-term impact to the school district community.

Collections of works, memorials, or other major gifts to the school district may be acknowledged and named by individual schools, subject to the district's policy and procedures for accepting donations. Prior to accepting such donations and naming, a plan for maintenance and upkeep must be identified and presented to the school Board.

The Board retains the right to make final determination in the naming of buildings, major portions of school buildings, or school grounds. This policy notwithstanding, it is the intent of the Board that naming of portions of the building and school grounds occur infrequently and on a limited based.

Policy adopted:
